

# Genesis Journeys Set Dropcard – Download Instructions

Thank you for purchasing the Genesis Journeys Set on the Dropcard format. Here are the instructions to download your purchase. We strongly recommend downloading the zipped folder to a computer first, extracting the files and then opening in your favorite media player, or transferring to a mobile device at that point.

1. Open a web browser and type in the address for the Dropcard:  
<http://www.dropcards.com/genesisjourneysset/>
2. Enter the code provided on the back of the card. Please note this code is unique to you and cannot be transferred. It may only be used once (although, in case of errors, you may use the code a second time to download the purchase with 15 minutes of the initial download).
3. This will bring up a list of the CDs included on the card:
  - a. Clash of Destiny
  - b. Madam, I'm Adam
  - c. The Gathering Storm
  - d. Tower of Power

You have the choice to download each zipped folder individually or to check the box to Download All. (The full set is over 380 MB, so if you have slower internet bandwidth, it may be easier to download the CDs individually, otherwise we recommend Download All).

4. Once downloaded, follow the instructions below based on your operating system to unzip/extract the files:

## **FOR MAC COMPUTERS:**

1. Clicking the link should automatically download the files onto your computer; typically in the Downloads folder.
2. After you open this folder, highlight all the MP3's, right click (2 fingers on trackpad for MAC) and open the files with iTunes.
3. After this, your iTunes should open and you can listen to the Downloads. This should sync to your iPhone, iPad and other Apple devices if you have home sharing\* turned on.

## **FOR PC COMPUTERS:**

1. Clicking the link should automatically download the files as a zipped folder onto your computer.
2. Right click on the zipped folder and click Extract All to unzip the files.
4. Open iTunes or other media player. From the File Menu select "Add Folder to Library". You can now play the tracks on your chosen media player on the computer.
